

Hashem Ahmed Alkhalidy

Full-Stack Developer | Software Developer Intern

+973 36077327 | hashemalsaie0457@gmail.com | LinkedIn | GitHub

Portfolio: hadrawer.github.io/portfolio

PROFESSIONAL SUMMARY

Full-stack developer and software developer intern with hands-on experience building multi-tenant SaaS platforms, REST and GraphQL APIs, blockchain network tooling, tokenized financial applications, authentication systems, and data-driven interfaces. Strong foundation in Rust, Go, TypeScript, JavaScript, Python, Solidity, backend development, and secure user flows. Focused on junior software developer and full-stack roles requiring API integration, maintainable architecture, database design, and collaborative delivery.

EXPERIENCE

Script Solutions | Software Developer Intern | Sanabis, Bahrain | Jul 2026 - Aug 2026

- Building practical software development experience in an IT services environment focused on SaaS solutions, custom software development, API integration, payment integration, DevOps services, and fintech solutions.
- Supporting feature implementation, debugging, testing, and documentation tasks under developer supervision, with emphasis on clean code and maintainable delivery workflows.
- Strengthening professional development habits including version control, requirement analysis, issue tracking, and collaboration with technical team members.

EDUCATION

University of Bahrain | BSc Computer Science, Cloud Computing Track | Jan 2022 - Present

- Relevant coursework: Cloud Computing, Data Structures and Algorithms, Databases, Software Project Management, Computer Networks, Cryptography and Computer Security, Big Data.

Reboot Coding Institute | Full Stack Development Diploma | Jan 2024 - Jul 2026

- Project-based software engineering program focused on backend systems, web development, algorithms, systems programming, collaboration, and practical delivery.

TECHNICAL SKILLS

Languages: Rust, Go (Golang), TypeScript, JavaScript (ES6+), Python, Solidity, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS, responsive UI, SVG data visualization, Arabic-ready interfaces

Backend and APIs: FastAPI, REST APIs, GraphQL, SQLAlchemy, Pydantic, JWT authentication, authorization, WebSockets

Databases and Storage: PostgreSQL, SQLite, Alembic migrations, Neon, relational data modeling

Blockchain: Ethereum, Geth, Nethermind, Clique consensus, ERC20, tokenized assets, smart contracts, blockchain RPC

Tools and Platforms: Git, GitHub, Linux/Unix, Docker, Vercel, Postman, CLI workflows

PROJECTS

ClinicFlow | Full-Stack Clinic Management SaaS | *Next.js, TypeScript, Tailwind CSS, FastAPI, SQLAlchemy, PostgreSQL, JWT*

- Developed a multi-tenant clinic management platform covering patient records, appointments, clinical visits, prescriptions, pharmacy inventory, billing, insurance, messaging, analytics, documents, and quality management.
- Implemented JWT authentication, role-based access control, clinic-level data isolation, audit logging, Alembic migrations, and separate Vercel deployments connected to Neon PostgreSQL.

Financial Instruments Platform | *Ethereum, Solidity, smart contracts, REST API, database, web interface*

- Developed a hybrid blockchain marketplace for a stablecoin, tokenized company shares, and government bonds, with wallet connection, asset pages, order placement, portfolio tracking, deposits, and withdrawals.
- Built financial instrument and vault smart contracts, asset and order APIs, price-history storage, populated test data, and trade execution capable of combining multiple offers to fulfil a market request.
- Implemented dividend distribution for share owners and withdrawal controls that prevent assets locked in pending orders from leaving the platform.

PROJECTS CONTINUED

Node Dashboard - Benchy | *Python, Ethereum, Geth, Nethermind, Docker, CLI, JSON-RPC*

- Built a CLI tool to launch and manage a private five-node Ethereum network using Geth and Nethermind with Clique consensus, supporting background execution and direct or containerized nodes.
- Implemented monitoring for latest blocks, connected peers, mempool transactions, CPU and memory usage, Ethereum addresses, and balances, plus transaction scenarios and temporary node failure recovery.

Alsayh - Graduation Project | *Next.js, FastAPI, PostgreSQL, AI travel planning*

- Built a full-stack tourism-focused AI itinerary planner using Next.js, FastAPI, PostgreSQL, API integrations, and structured destination data.
- Contributed to personalized recommendations, backend APIs, secure user flows, saved itineraries, and bilingual travel-planning experiences.

Social Media Platform | *Go, Next.js, SQLite, REST APIs, authentication, privacy controls*

- Developed authentication, profile management, edit account flows, avatar support, and public/private account privacy features.
- Implemented post visibility rules and follower/following views; collaborated with teammates who delivered groups, notifications, and WebSocket chat features.

GraphQL Profile Dashboard | *JavaScript, GraphQL, JWT, authentication, SVG data visualization*

- Created a hosted profile dashboard that authenticates users with JWT and retrieves personal school data from a GraphQL endpoint.
- Used normal, nested, and argument-based queries to display user data and generated SVG graphs for XP, project outcomes, and audit performance.

NFT Marketplace | *Solidity, Ethereum, smart contracts, frontend integration*

- Developed an Ethereum marketplace workflow for listing, buying, transferring, and tracking NFTs through smart contract interactions.
- Integrated frontend actions with blockchain transactions and marketplace state to support ownership, purchase, and transfer history flows.

Thunder Payment Channel | *Node.js, CLI tooling, blockchain RPC, payment channels*

- Built a command-line payment channel prototype with wallet import, peer connection, channel funding, balance checks, and node information commands.
- Designed the project around blockchain RPC communication and channel state management to explore off-chain transaction concepts.

Localhost Server Project | *Rust, HTTP, backend architecture*

- Implemented a local HTTP server in Rust with structured request handling, routing logic, response generation, error handling, and clean project organization.

Custom JavaScript Mini-Framework | *JavaScript, client-side routing, state management*

- Developed a lightweight frontend framework for state management, reusable UI logic, and client-side routing, reducing repetitive code across interactive pages.
